# Plant and Seed List

Frank H. Rose

1020 Poplar Street

Missoula, Montana, U.S.A.

Your source for Western American Alpines and Native Plants of the Northern Rocky Mountain Region.

... All seed 25c per liberal, dated packet. Postpaid.

--- All plants \$2.50 per species, F.O.B. Missoula, Montana.

The more dots or dashes the more regularly collected.

The Following Key Letters Are Used:

## PLANT DESCRIPTION

- Bi. Biennial or short-lived perennial.  
All others perennials.  
Bu. Bulbose.  
Br. Berries in fall.  
E. Evergreen.  
Sh. Shrub.  
T. Tree.  
H. For border or for naturalization.  
p. For pool or stream side.  
R. Suitable for rock-garden use.  
wg. Better in wild garden.  
... Seeds collected.  
--- Plants collected.  
\* Others of this genus available.  
† Acceptable substitutes. (You use this one.)

## NATURAL HABITAT

- C. Cold.  
Cr. Cold root-run as under a rock.  
Cs. Cold sun or part shade.  
D. Dry. Drought dry.  
d. Drainage. Perfect or better, especially in winter.  
Df. Dry foliage as on a scree.  
M. Moist. At least in spring.  
W. Really wet as for Mimulus.  
S. Sun.  
F. Virgin Forest soil with shade.  
Fo. Open woods with part shade.  
Ph.8. Lime. Ph.5. Acid  
Dor. Preferably shipped dormant.

Order any desired species native to Montana, Idaho, or Northern Wyoming whether listed here or not. I will try to get what you want and will send, in season and usually dormant, three to a dozen or more of each species depending chiefly upon abundance. It is the time and travel necessary for the first one that fixes the \$2.50 per species charge. We have magnificent distances here in the West.

When possible, place your order well before the collecting season and indicate whether you prefer large.....or small.....plants. Sometimes there is a choice. No substitutions will be made unless authorized.....but when authorized and necessary they will be charged at only half price.

Check your experience with any familiar species against the Natural Habitat data given here. My limited gardening experience will not permit me to call it Cultural Directions. All plants will grow when we know and meet their minimum requirements. Even Mother Nature isn't always successful, so I appreciate your suggestions.

Use this list for your order if you wish, another will be sent you. Send no money until requested, unless substitution is authorized. I may not be able to get everything you want.

Perhaps you know of someone that might care to see this list. Send me the address and I will mail one. It's worth<sup>1</sup>a stamp to hear from you.

Here is my latest general seed and plant list of the Northern Rockies.  
Would you do me the favor, whenever possible, of bringing it to the attention  
of those whose interests include the growing of native plants? Additional  
copies are available to those especially interested upon request.

- Brodiaea douglasii* Bu H blue 1½' d D.M S.Fo. Few large bulbs.

The following ferns are available at \$2.50 per species.

**DWARF ROCKERY FERNS** (6 or more of each sent)

**Cheilanthes gracillina** Rock Brake Ph.6.

" **feeii** Ph.8.

" **siliquosa** (**Cryptogramma densa**) Just sometimes.

**Cystopteris fragilis** Fragile Fern for a mossy bank.

**Polypodium hesperium** Evergreen and rare here.

**Woodsia oregana** Smooth Woodsia for shade.

" **scopulina** Hairy Woodsia more sun tolerant.

15 plants unnamed representing two or more of above species \$2.50.

**TALLER WOODS FERNS** (three or more sent)

**Adiantum pedatum** Maiden Hair Fern 1¼'.

**Athyrium filix-femina** Lady Fern. Easiest to grow 3'.

**Dryopteris spinulosa** or var **dilitata** Wood Fern E 2'.

" **filix-mas** Male Fern 3'.

**Polystichum lonchitis** Holly Fern E C M d 1'.

" **munitum** Sword or Christmas Fern E 1½'.

**Phagepteris dryopteris** Western Oak or Beech Fern 8" Cedar Fern to me.

10 plants representing three or more of the above species \$2.50.

Duplicate this collection as many times as your fern bed requires.

**Baby Evergreens** for Forest or Window

18-25 trees of three or more species 4"-8" \$2.50.

Christmas greens, winter bouquets, pine cones, moss, and weathered wood are not as a rule collected. I guess I am just not interested, but a fair sample of any for \$2.50 if and when.

**Always when looking** for a particular species I must pass by many other "just as good" species for which I have no orders. I will be glad to supply these in any number, your selection or mine, at \$1.00 per species. Same three to a dozen or more sent. I am already there and don't have to charge travel. How many please?..... Check (†) on list.

Shall I send only current years seed....., or the latest available..... at one-half price? Refund....., back order....., or substitute.....? Substitutes also are half-price.

**Regarding your order:** Don't count too much on items preceded by only one (.) or (-). I know these plants and where they may be found but, for one reason or another, usually because they are not seen at a suitable time, they have not been regularly collected in the past. Neither do I get seed of all of these species every year, about 150 on the average. Sometimes there is no crop or, more likely, I am not there at the right time. I try to get what you want and if your order is on my collecting list you will get the first available.

Plants like *Lilium montanum*, *Habenaria orbiculata*, *Fritillaria atropurpurea* and *Cypripedium fasciculatum*, rare on areas where I know them, are omitted. Others, like *Leucocrinum montanum*, Sand Lily; *Romanzoffia sitchensis*, Mist Maidens; *Lychnis apetala*, Moss Campion, and *Cypripedium calceolus pubescens*, Yellow Lady's Slipper, common enough in some sections but as now known to me, inaccessible or unavailable, are also omitted. These and any of the unknowns might become available on any field trip so indicate what you would like.

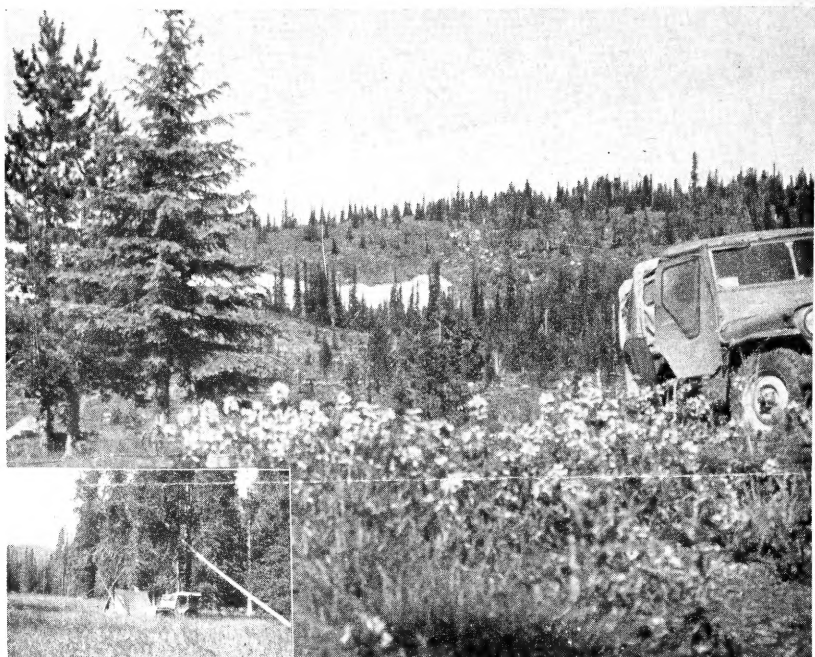

**You will have to hurry.** Each year the hills I climb become higher and steeper. Virgin and remote areas become ever more remote. The familiar features of even old friends among the wild flowers appear to my dimming eyes to justify the "new" older names young botanists discover for them. I have sought out, with my hand lens, a number of these new names for this list and trust that they will stand up until they become familiar. Too soon, I must tighten my belt into a new hole farther out and content myself with a limited list of easily accessible and regularly ordered species. Let's become acquainted while I still have youth.

My next published list will, I hope, be cut to 50 species. Will those you want be in the future list? Indicate, if you wish, "in" or "out." Do you know someone else who would like to play this "in" and "out" game?

Decapitalization is here used. It is not a crusade with me but laziness. Even the endings may not agree, but if I am using a wrong name for any plant I should appreciate knowing it.

# FRANK H. ROSE

## Plant Collecting in Montana, Idaho and Northern Wyoming

PENSTEMON FLAVESCENS AND SNOW IN AUGUST

## NATIVE PLANTS THAT GROW WILD

In the Northern Rocky Mountain Region

**This is a partial list.** For several thousand additional species see any manual, book, plant list or bulletin covering the area, including those of Glacier, Yellowstone and Rocky Mountain National Parks.

A wholesale quantity price quoted on any item upon request.

**The picture above** tells but little of my wide open spaces, that part of the West that is not seen from the highways. I cannot send you the snow-capped peaks, the blue sky or the clear, pine-scented air but Mother Nature has been liberal in her plantings and we are glad to divide items you would like to try in your own small garden. Some plants go dormant in June while others are under snow until July or August. Remote areas are visited infrequently and I do not collect surpluses, so to avoid disappointment let me know soon what you may want.

**Good until used.** Native plants do not change much so use this list year after year. Return it and a fresh copy will be sent.
